Submission Checklist

👉 Check off each of the features you have completed. **You will only be graded on the features you check off.**

- ☐ Question #1 answered below (*all 3 subquestions with minimum word count*)
- ☐ Question #2 answered below (*all 3 subquestions with minimum word count*)
- ☐ Wireframe

Individual Brainstorm

? **Question #1:** Describe your website subject in detail:

What do you already know about your social impact topic? (*50+ words*)

My social impact topic is recycling. I do not currently know a lot about this topic, other than vague notions of how most recyclable items do not get recycled, and that this wasted recycling potential can contribute to the harm of our planet (in ways I do not know because I need to further research).

What do you still need to find out about your social impact topic in order to create a meaningful website? (*20+ words*)

I need to find out about the full scope of the impact of recycling, and not recycling, and who is affected by it.

Who are the stakeholders involved with/affected by your social impact topic? ie children, people living in cities, politicians, CEOs, female-identifying persons (*20+ words*)

Those not living in rural areas will likely be around products that can be recycled the most, so one stakeholder is those living in suburbs and cities. However, most groups could be stakeholders because recycling concerns the environment of the entire world.

? **Question #2:** Describe your proposed website in detail:

What is the purpose of your website? (30+ words)

The purpose of my website is to provide a highly interactive, functional, informative, and incentivizing medium for all people to participate in recycling.

Who is your intended user? (30+ words)

The intended user is likely late teens and adults. Audiences younger than teens will likely not find topics on the environment worthwhile; late teens and adults are more likely to have the potential to gain a passion for a multifaceted topic such as recycling and the environment.

How will your user interact with your website? (30+ words)

The user could interact with the website to learn, to take action (recycle), to log (keep track of their efforts), and earn in-game rewards (points, titles, accessories, etc.),

Wireframe

? When creating your wireframe, ask yourself:

- What about your topic do you want shared on your website?
- How do you want your content and website structured?

? Copy/Paste a screenshot of your wireframe or a link to it below (if using a link, make sure it is publicly viewable).
